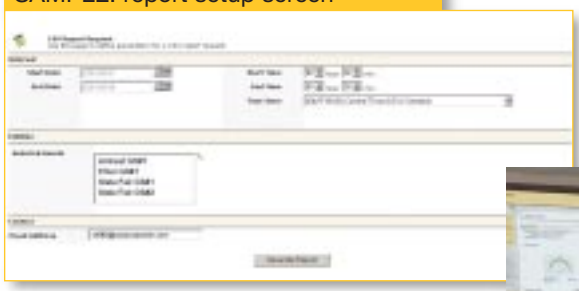
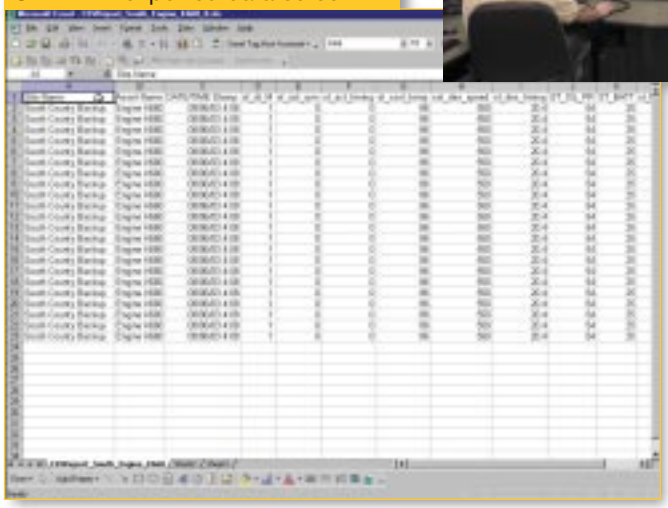
Data Spreadsheet Reports

An Advanced Reporting Service

SAMPLE: report setup screen



SAMPLE: exported data screen



The Data Spreadsheet Report option gives you a data file export in a tabular spreadsheet format that includes key parameters on your asset or site over a specified period.

This data file can be loaded into common spreadsheet or other data management software for analysis, graphing or manipulation. The report is extremely valuable for applications where engine or site performance is vital and you want to do your own failure or performance analysis.

The PointGuard WebCenter can be configured to automatically email the report file using a predefined mailing list.

The Data Spreadsheet Report is a tool that gives you quick access to raw data on a selective basis and the flexibility to analyze or graph it using nearly any software package you wish.
