

On-Demand Control

A Coordinator-Provided Service

PointGuard Coordinator

The On-Demand Control service option gives you the ability to control your on-site equipment by simply contacting PointGuard Operations with your request.

The PointGuard Coordinator acts on your request, per the terms of your existing contracts. This service is valuable when you would like to start your standby system as a storm approaches, in anticipation of a power outage. It's also extremely valuable for compliance with curtailment, peak shaving, or capacity contracts. The local utility simply makes one phone call to PointGuard Operations and your gensets are started or stopped per your contract requirements.

The Coordinators follow all predefined procedures and the PointGuard system always works through the on-site switchgear and safety systems. With a single phone call to PointGuard, you control multiple gensets at multiple sites that are hundreds of miles apart, all in a matter of minutes.

Our trained Coordinators are there for you 24/7/365, ready to respond to your on-demand request for power!
